

## Flexible connectors made out of copper- and aluminium foils

We offer a wide range of standardized laminated connectors as well as multifarious designs according to your drawings or wishes. All articles are produced in high quality on modern plants with suitable materials and manufacturing processes in coordination with your applications. Following manufacturing processes are at our disposal:

- press-/diffusion welding
- inert gas welding (WIG/MIG)
- electron-beam welding
- soldering/brazing
- riveting
- extrusion of insulated supple bars

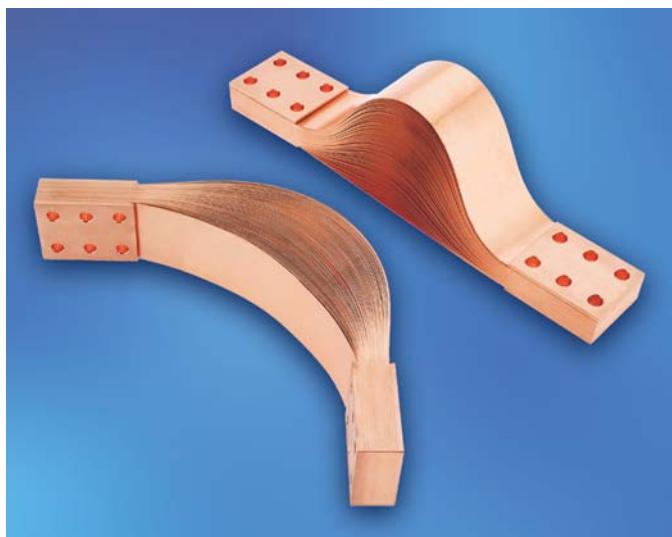

Take the chance to profit from our experience in designing and manufacturing of flexible high current components and contact us. With pleasure our employees assist your company in finding optimal solutions.

## **Flexible laminated connectors used in welding guns manufactured out of copper strips**

## **Flexible laminated connectors used in welding machines manufactured out of copper strips**

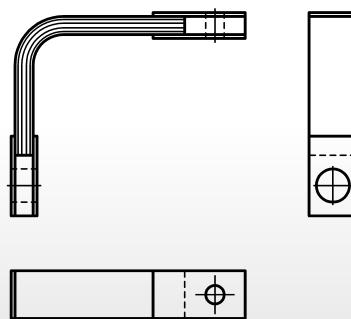

To realize two-dimensional movements inside of welding guns our flexible laminated copper connectors are needed. In standard design they are manufactured out of E-Cu/Cu-ETP strips with a thickness of 0,10 mm or 0,20 mm. A special press-riveting procedure enables an optimal connection of the strips. The contact areas are additionally equipped with copper sheets or caps. To guarantee durability and functioning it is necessary to use copper material with the right and optimal strength in coordination with the application. Only connectors with the right dimensions manufactured out of the right material enable an optimal lifetime. For special applications we deliver also electron-beam welded components. By using this special welding process the connection of the copper material can be realized without worth mentioning thermal restriction. So it is possible to preserve the needed elasticity of the laminated connectors. When designing new products or if problems must be solved, don't hesitate to contact us. With pleasure we offer our "know how" and support your efforts.

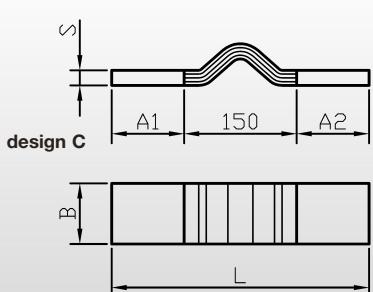

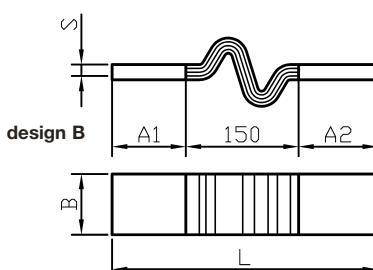

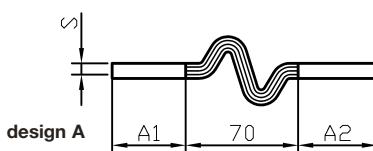

Additionally to our connectors for welding guns, we manufacture also a wide range of flexible elements used in welding machines. So we offer designs from the little laminated connector, similar to the welding gun designs, up to conductor cross-sections of 2000 mm<sup>2</sup> or more, with contact areas up to 200 mm width. Just as much we are specialized of the manufacturing of flexible as well as solid copper components for electrical heating equipments. Everywhere where flexible components for current transfer in conjunction with a realization of movements are needed we are the right partner. Whether riveted or welded, whether with air- or water cooled contact areas, we deliver the right components coordinated with your applications. Also solid copper components according to your drawings or wishes, manufactured of CNC-machines, are part of our product range. We deliver spare parts as well as components in serious production or complete machine equipments.

### **Necessary order information**

Identical with the information on the opposite page.

**Flexible expansion connectors**  
**material: copper HCP-foils**  
**contact areas: press-welded**

The expansion connectors in the following tables consist out of copper HCP-foils according to DIN EN 13599 with a thickness of 0,1 mm or 0,3 mm. The contact areas are manufactured in a press-welded design.

The press-welding procedure is a special resistance welding process, which enables a welding of packages of copper foils with different strength in a defined area together. By working with this procedure it is not necessary to use any form of welding additives.

So press-welded connectors are excellent electrical conductors due to their perfect molecular connection. The contact areas can be bored, milled or bent without problem. The width of the contact areas are so selected that it is possible to install several expansion connectors in a distance of 2 mm side by side (e.g. for generator connections etc.). With drilling on request, e.g. according to DIN 43673 page 1 + 2, DIN 46206 page 2 or according to your drawings/samples or wishes.

On request it is also possible to deliver designs with coated contact areas (e.g. tinned or silvered).

**When placing an order,  
please specify:**

- Part-No.
- thickness of the foils (0,1 mm or 0,3 mm)
- design A, B or C
- length of the contact areas A1/A2
- with or without drilling

**Example:**

- Part-No. 15509 (B x S = 98 x 10 mm)
- design B (expansion part 150 mm)
- contact areas A1/A2 100 mm = total length 350 mm (100 + 100 + 150 mm)
- thickness of the foils 0,1 mm
- without drilling

**Remark:**

The minimum current capacity of expansion connectors is in accordance with the values of solid busbars (cf. DIN 43671 resp. DIN 46276 part 1 + 2).

**Flexible expansion connectors**  
**material: aluminium foils**  
**contact areas: inert gas welded**

The laminates of our standard aluminium expansion connectors consist out of pure aluminium foils with a thick-ness of 0,3 mm. As contact areas we use solid aluminium pieces. They are welded by an electrical arc and shielded with inert gas to prevent oxidation of the molten bath.

The width of the contact areas are so selected that it is possible to install several expansion connectors in a distance of 2 mm side by side (e.g. for generator connections etc.). With drilling on request, e.g. according to DIN 43673 page 1 + 2, DIN 46206 page 2 or according to your drawings/samples or wishes.

Every time, when transformers have current connections shaped as tubing connectors instead of rectangular busbars, special contact elements are needed. For such applications we offer our flexible copper connectors consisting out of an expansion part and special clamps on one or both sides. They are deliverable for current capacities up to some thousand amps and are individual designed in coordination with the power and the dimensions of the transformer. Main applications are inside of steel industrial plants. Our connectors are deliverable with special clamps on one and rectangular contact area at the other side as well as with clamps on both sides. So it is possible to connect the tubing connectors of the transformer with power leading tube systems as well as with prefabricated busbar systems. In dependence of the current load the connectors are equipped with an expansion part on the top as well as on the top and on the bottom part of the clamp.

## PVC insulated supple bars insulated by a black vinyl compound, standard length 2 m

### Construction and application

Supple bars are insulated flat electrical conductors. They consist of several layers of uncoated or tin plated Cu-ETP strips (99,9% copper) and are insulated with a flexible high quality vinyl compound. This special compound is self-extinguishing and free of lead. The flexibility of the bars offers an installation into difficult equipment or small places. They have become particularly well established as connectors in switchgears and between transformers, generators, switching devices and prefabricated power networks up to a operating voltage of 1 kV. As a consequence of their large surface area and hence their favourable thermal radiation properties, they can handle heavier current loads than solid busbars of the same cross-section. So it is possible to use components with smaller dimensions. The elasticity of the vinyl compound realizes a deforming of bars also when working with larger cross-sections.

The connection level can also be changed by bending and twisting through 180°. Our supple bars enable an individual fitting of the components, a reduction of the cross-section and a reduction of the installation time. So they are a very interesting cost-saving product.

### Technical data

#### Electrical conductor

- copper strips Cu-ETP (99,9% copper)
- surface uncoated or tinned
- stability > = 200 N/mm<sup>2</sup>
- electrical conductivity 57 S x m/mm<sup>2</sup>

#### Insulation

- special vinyl compound
- black, free of lead
- thickness 1,8-2 mm
- self-extinguishing acc. to UL 94 VO
- shore hardness 85 A
- elasticity 365%
- AC voltage between potential and insulating material 16,5 kV
- AC voltage between two insulated supple bars in contact 33 kV
- operating voltage max 1 kV
- operating temperature -20° C up to +105° C

### Installation

Simple mounting by drilling, punching or underside clamping. The copper strips are sliding when bending the bars, therefore it is necessary to bend the bars before starting the cutting, drilling or punching process.

To prevent a displacement of the copper strips a tightly clamping of the bars is necessary too when carrying out the drilling or punching process.

### Remark:

Stocked standard design bare and the \* marked tinned designs.  
In special design all dimensions are deliverable with a tin coated surface and in variable lengths (e.g. 3 m). All information about current load are approximate values in consideration of the cables heat for single laying of air cooled cables and ambient temperature +35° C.

The temperature of the conductor is independent on the installation, the application, the cooling, the ambient temperature etc., so that if necessary reducing factors are to be considered. With pleasure our employees assist your company in finding optimal solutions.

**Insulated supple bars, free of halogen  
made out of bare Cu-ETP strips  
insulated by a black thermoplastic,  
standard length 2 m**

### Construction and application

Construction according to the PVC-insulated design but insulated by an extruded high quality thermoplastic. The insulating material is free of halogen and suitable for all applications which requires a halogen free design of connectors. The material combined with the special injection moulding process realizes a manufacturing of flexible bars. The hardness of the material is a little bit stronger compared with the PVC-material but it offers although a good deformation of the bars.

### Installation

Simple mounting by drilling, punching or underside clamping. The copper strips are sliding when bending the bars, therefore it is necessary to bend the bars before starting the cutting, drilling or punching process. To prevent a displacement of the copper strips a tightly clamping of the bars is necessary too when carrying out the processes.

### Technical data

#### Electrical conductor

- copper strips cu-ETP (99,9% copper)
- surface uncoated or tinned
- stability > = 200 N/mm<sup>2</sup>
- electrical conductivity 57 S x m/mm<sup>2</sup>

#### Insulation

- special thermoplastic
- black, free of halogen
- thickness 1,8-2 mm
- self-extinguishing
- shore hardness 85 A
- elasticity 185%
- AC voltage between potential and insulating material 16,5 kV
- AC voltage between two insulated supple bars in contact 33 kV
- operating voltage max 1 kV
- operating temperature -20° C up to +105° C

Bended, twisted and drilled supple bars  
acc. to your wishes or drawings

Additionally to the delivery of supple bars in standard length of 2 m we deliver bended, twisted and drilled designs acc. to customers' wishes or drawings in large as well as small quantities. If you need more information don't hesitate to contact us. With pleasure our employees assist your company in finding optimal solutions.

## Bus- and supple bar connectors

### Remark:

Material zinc coated and chrome plated steel. Suitable to connect busbars between each other as well as busbars with our insulated supple bars. Busbar connectors with other dimensions as in our table are available on request.

## Brace terminals

Part-No.	technical data				
	com- current-load B x H	busbar B x H	supple bar B x H	torque	
10568	750 A 30 x 25	20 x 5 30 x 10	3 x 20 x 1 bis 10 x 24 x 1	30 Nm	
10569	800 A 32 x 25	20 x 5 30 x 10	3 x 20 x 1 bis 10 x 32 x 1	30 Nm	
10573	1250 A 41 x 25	30 x 10	5 x 32 x 1 bis	40 Nm	
10574		40 x 10	10 x 40 x 1		
10575		50 x 10			
10576		60 x 10			

### Remark:

Suitable to connect busbars with our insulated supple bars. The jaw type terminals enable the busbar to be gripped completely and connectors to be connected without drilling. The information about current load is a approximate value under optimized conditions. The relation between conductor cross-section and current load fixed in national or international regulations are not cancelled through our information. Additionally it is necessary to take the values of the current rates of your insulated supple bars into consideration.
